

Watermelon Estimation Chart

February 2012, by Andy Wolf

This chart is based on approximately 150 watermelons measured and weighed at GPC sites, taken from the Bigpumpkins.com results database. About 60% of melons will fall within 5% of the estimate. The measurements are the Over-the-Top (OTT) totals - the standard three way measurements, same as are used to measure pumpkins. Straight length and girth are not included in these measurements. Melons that are longer may tend to weigh lighter to the chart, while “fatter” melons can be more likely to be heavier than the estimate.

Inches	Pounds	Inches	Pounds	Inches	Pounds	Inches	Pounds	Inches	Pounds	Inches	Pounds
